“The principle of angio-plasty with modulated dilatation potentially results in a reduction of severe flow limiting dissections. Early experience with this new angio-plasty technique is promising and warrants comparative studies with conventional balloon angio-plasty in the future.”

Professor Thomas Zeller
Patient Info:
- 67 year old
- Diffused disease at right femo-popliteal
- CTO of proximal anterior tibial
- Distal tight lesion at anterior tibial
- CTO of peroneal and posterior tibial

Dr. Craig Walker
Lafayette Regional Hospital
Lafayette, LA

Physician Quote
“I feel confident in using Chocolate in very complex cases to achieve such reliable results.”

PRE: CTO of mid right anterior tibial
POST: Final result after Chocolate 3.0x40mm (2 inflations) and Coyote 4.0x80mm
**Patient Info:**

3 vessel disease with total & sub-total defused occlusions along the right shin, with multiple collaterals.

**Physician Quote**

*I did not expect to get such a good result of CTO revascularization from a balloon as a single treatment tool!*

---

**PRE: CTO of distal right peroneal**

**POST: Final result after Chocolate 3.0x80mm**
**Patient Info:**

- Critical limb ischemia
- Left SFA in-stent restenosis
- CTO of anterior tibial and peroneal arteries
- Diffusely diseased posterior tibial single vessel runoff to the foot

**Physician Quote**

“Chocolate gave me an excellent adjunctive result in optimizing the single vessel runoff (PT), which was severely diseased previously in the setting of critical limb ischemia.”

**Dr. Jon George**
Deborah Heart & Lung Hospital
Browns Mills, NJ
Apr 25, 2012

**Chocolate® PTA Balloon Catheter**

PRE: Proximal posterior tibial long lesion

POST: Final result after Chocolate 3.0x40mm to posterior tibial
Patient Info:

- CTO of right distal popliteal artery
- Crosser™ was used to cross the CTO followed by a 0.7 laser catheter

Dr. Prakash Makam
Community Hospital
Munster, IN

Physician Quote
“I was glad I had Chocolate to achieve this remarkable result!”

PRE: CTO of right distal popliteal artery

POST: Final result after Chocolate 3.0x80mm, 4 inflations @ 9-12 atm.
Patient Info:

- 62 year old male with known CAD and PVD
- CTO of left popliteal artery
- Diagnostic angio revealed large tibial vessels with good runoff to the distal leg
- Patient has knee prosthesis that blocks x-rays at the popliteal region

Dr. William Gray
Columbia University Medical Center
New York, NY
Oct 16, 2012

Physician Quote
“This is very impressive! No other device should be used after such optimal result!”

PRE: CTO of left popliteal artery in ant. & lateral views
POST: Final result after multiple inflations of Chocolate 4.0x80mm
Patient Info:

- 52 year old female
- Diabetic with ulcer on right foot
- CTO of distal superficial femoral artery (SFA) continuing distally past tibioperoneal trunk into posterior tibial

Dr. Craig Walker, Dr. Louis Salvaggio
Lafayette Regional MC
Lafayette LA

Physician Quote
“When I use the Chocolate balloon in highly calcified cases, I keep getting good angiographic results with far less flow-limiting dissections or recoil, and with good vessel runoff to the foot.”
**Patient Info:**

- 69 year old male
- Critical limp ischemia on left lower extremity
- Rutherford IV
- Diabetes Mellitus Type II
- CAD with CABG x4 in 2002
- Hypertension and hyperlipidaemia

**Physician Quote**

“I was able to achieve a stent-like result with no dissections – great experience!”

---

**PRE:** CTO left posterior tibial and peroneal  
**POST:** Left peroneal after Chocolate 3.5x80mm, two inflations (single device used)
Patient Info:

- 76 year old male
- COPD, CHF, post CABG, ischemic cardiomyopathy and PAD
- Rutherford III and defused disease in the left leg (SFA, POP)

Treated: CSI atherectomy stealth 2.0 followed by Chocolate 6.0x80mm, 1 inflation of 2:40 min at 9 atm.

Dr. Jihad Mustapha
Metro Health Hospital
Wyoming, MI
